

Quick guide – Hitlist settings in SDL Trados Studio

- 1. In Editor click on the View tab and then on the Term Recognition icon.
- 2. In the Term Recognition window click on the Hitlist settings icon.

3. The *Hitlist settings* dialogue window will now open. In this window all the options in the *Fields* section must be ticked.

4. Then click on *Select Fields…* in this window. The *Field Selection* dialogue window opens. In this window click on the *Select All* button.

When all boxes are ticked, confirm with *OK* (and again in the next window). In exceptional cases, selecting fields individually is recommended, e.g. when specific fields are not relevant to the translation process.

5. Additional information for each entry now appears in the *Term Recognition* window (status, source, etc.). It may be that these settings need to be amended each time. However, these few clicks have a big impact!
